## Allowable Subject Matter

## 1. Claims 1-5 and 7-21 are allowed.

The following is an examiner's statement of reasons for allowance: None of the prior art of record teaches or suggests a Systems for selecting open shortest path first (OSPF) aggregates and aggregate weights for a particular area to advertise comprising: a database including a candidate OSPF aggregates and corresponding weights, the candidate OSPF aggregates represented by trees; a weight assigner, associated with the database, that assigns, for the OSPF aggregates, weights based on either an average distance of subnets in an area for a particular area border router (ABR) of the area; a candidate aggregate selector configured to select subsets of each of said tree to reduce an error thereof and combine said subsets to yield a subset to reduce and error associated with said trees, said subset to be advertised by an area border router (ABR) such that the shortest path length between a particular source and destination subnets resulting from advertisement of a set of weighted aggregates approaches said shortest path length between said particular source and destination subnets irrespective of the weights advertisement

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

The closes prior art of record HSU USPN (6363319), teaches, "OSPF introduces the concept of area to improve Autonomous System (AS) scalability through topology hierarchy. In this section, we consider extending the multi-class algorithm with cost bias to inter-area routing scenarios. The biased cost route selector follows the approach in which the area border routers (ABRs) calculate the available path bandwidths to networks external to an area and advertise them in the summary LSAs (or some new Opaque LSAs." (Col. 10, lines 22-41) while Rabinovich USPN. (6256675) teaches average distance of subnets in an area (autonomous system areas) as disclosed in Col. 14, lines 8-33 and col. 19, lines 12 to col. 20, line 10.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yasin Barqadle whose telephone number is 571-272-3947. The examiner can normally be reached on 9:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Burgess can be reached on 571-272-3949. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306 for regular communications and 703-746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.

Information regarding the status of an application may be obtained form the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either private PAIR or public PAIR system. Status information for unpublished applications is available through private PAIR only.
